Contents

- Following icons should help you to find most important things in the huge amount of slides and aid better repetition of the theme.
- Slides without icons are also important. It is not good idea to skip them. It is better to go through the whole presentation and pay special attention to the slides with the third and later icon. It is possible to go only through important ones in the second pass.

- Prerequisite slide (should be familiar from previous courses)

P

- For orientation – it is enough to know that something like this exists. It is meaningless to memorize it row by row.

- This should not be overlooked – some very important information is included

- It is necessary to think about it. It is not a good idea to memorize it mechanically

- This should be studied more deeply. It is not necessary to memorize the identifiers exactly, but principles and basic functions are important

- Very important slide - basic concepts, definitions and most important principles included

- It is necessary to try it and understand to the example

Thank you for your attention!
